FOREWARD

In the forty-five years since the salvage of the *Modern Greece*, an event that marks the beginning of underwater archaeology in North Carolina, there has been a steady growth in efforts to document the state's maritime history through underwater research. Nearly two dozen professionals and technicians are now employed at the North Carolina Underwater Archaeology Branch (N.C. UAB), the North Carolina Maritime Museum (NCMM), the Wilmington District U.S. Army Corps of Engineers (COE), and East Carolina University's (ECU) Program in Maritime Studies. Several North Carolina companies are currently involved in conducting underwater archaeological surveys, site assessments, and excavations for environmental review purposes and a number of individuals and groups are conducting ship search and recovery operations under the UAB permit system.

The results of these activities can be found in the pages that follow. They contain report references for all projects involving the location and documentation of physical remains pertaining to cultural activities within North Carolina waters.

Each reference is organized by the location within which the reported investigation took place. The Bibliography is divided into two geographical sections: Region and Body of Water. The Region section encompasses studies that are non-specific and cover broad areas or areas lying outside the state's three-mile limit, for example Cape Hatteras Area. The Body of Water section contains references organized by defined geographic areas. These areas include most rivers, lakes, sounds, inlets, and beach strands/near shore waters (see North Carolina's Body of Water Zoning Codes in this volume). In instances where underwater archaeological investigations take place in smaller waters, such as most creeks, the report is listed under the nearest associated Major Body of Water. Cross-referencing is provided for reports detailing work in several major watercourses.

This is the third update of the Underwater Archaeology Bibliography with the first edition appearing in 1988 and the second in 1996. This addition will be made available at <http://www.archaeology.ncdcr.gov/ncarch/underwater/underwater.htm> in the interest of providing a full understanding of the amount and type of underwater archaeological data available for any given area of North Carolina waters. For more information, write the Underwater Archaeology Branch, 1528 South Fort Fisher Boulevard, Kure Beach, NC 28449, phone (910) 458-9042, or email at uab@ncdcr.gov.
